Customer Problem Statements

The statements use the prescribed I am / I'm trying to / But / Because / Which makes me feel format. Concrete workflow details are included; where the team has not provided measured data, [number] is used instead of inventing a value.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Hardware team fulfilment technician	Process an approved Standard Laptop request and begin configuration.	I must manually create or receive a separate task after approval before I can start the hardware work.	The approved Requested Item does not automatically create and assign the required Catalog Task.	I lose [number] extra clicks/steps and face a delay between approval and hardware action.
PS-2	An employee requesting a Standard Laptop	Get my approved laptop request processed and moved to hardware fulfilment.	I have no direct automated hand-off that confirms the request has reached the Hardware team.	The post-approval task creation and assignment are handled separately from the request approval.	I am uncertain about the status and may need to ask for an update after approval.

Final Problem Statement

For the Hardware team, approved Standard Laptop requests require a manual post-approval task hand-off before configuration can begin, creating [number] additional processing steps and a possible delay between approval and hardware action. For the requesting employee, the absence of an automatic task hand-off makes the fulfilment status less visible and can lead to follow-up requests for updates. Therefore, the process needs an automated and traceable transition from approval to Hardware fulfilment.

Ideation Phase

Define the Problem Statements — Final

Consolidated Customer Problem Statements

PS-1 and PS-2 are shown once below. The final statement combines the Hardware fulfilment and requesting-employee perspectives.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Hardware team fulfilment technician	Process an approved Standard Laptop request and begin configuration.	I must manually create or receive a separate task after approval before I can start the hardware work.	The approved Requested Item does not automatically create and assign the required Catalog Task.	I lose [number] extra clicks/steps and face a delay between approval and hardware action.
PS-2	An employee requesting a Standard Laptop	Get my approved laptop request processed and moved to hardware fulfilment.	I have no direct automated hand-off that confirms the request has reached the Hardware team.	The post-approval task creation and assignment are handled separately from the request approval.	I am uncertain about the status and may need to ask for an update after approval.

Final Problem Statement — Combined

The Hardware team needs an automated post-approval hand-off because the current process requires manual task creation/assignment before configuration can begin, while the requesting employee needs clearer fulfilment visibility after approval. A traceable automated transition from an approved Standard Laptop Requested Item to a Hardware Catalog Task addresses both needs.

Concrete Detail Placeholders

Additional manual steps: [number] • Approval-to-Hardware delay: [number] minutes/hours • Follow-up status requests: [number]
