

Ideation Phase

Empathize & Discover — Empathy Map Canvas

Date	01 October 2026
Team ID	[TEAM ID]
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Persona: Hardware Team Fulfilment Technician

Perspective used for this map: a technician who receives approved laptop work and prepares the device for fulfilment. These are workflow-based assumptions and should be validated with a short chat with someone who performs this work.

VALIDATION NOTE

These observations are workflow-based assumptions, not claims from a completed interview. Validate them with a short conversation with a Hardware fulfilment technician before treating them as measured user research.

Ideation Phase

Empathy Map — Detailed Persona View

Persona: Hardware Team Fulfilment Technician

Role context: receives approved Standard Laptop work, checks task/request details, performs laptop configuration and updates the task. The statements below are workflow assumptions to be validated with a real technician.

THINK & FEEL

"I want approved work to reach my queue immediately." The technician wants accurate task details and worries about work remaining unassigned.

HEARS

The requester asks for status; the approver confirms that the request is approved; a manager may chase a deadline; another team may request the device for handover.

SEES

The technician sees the Standard Laptop Requested Item, approval state, Catalog Task, short description, assignment group and task status.

SAYS & DOES

"I'll start once the task is in my queue." The technician checks the request, verifies details, configures the laptop, updates the task and answers status questions.

PAINS → GAINS

P1 manual hand-off → G1 automatic task creation and assignment. P2 missing details → G2 standardized task information. P3 status interruptions → G3 visible task status. P4 deadline chasing → G4 traceable workflow and pending-task visibility.

Research Assumption

The empathy map is based on the supplied ServiceNow workflow and activities rather than a documented interview. A short validation conversation should confirm the technician's actual language, pain points and priority before final research claims are made.
