Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date: 01 October 2026

Team ID: SWTID-2026-9532

Purpose / Vision: Automate post-approval Hardware task creation for Standard Laptop requests in ServiceNow.

1 CS — CUSTOMER SEGMENT(S) Requester; Approver; primary fulfilment user: Hardware technician.	6 CC — CUSTOMER CONSTRAINTS Manual handoff after approval can delay Hardware action; users depend on ServiceNow access and stable connectivity.	5 AS — AVAILABLE SOLUTIONS 1. Manual task: Pro — simplest to start. Con — extra clicks and missed handoffs. 2. Email/chat handoff: Pro — familiar. Con — task ownership is less traceable. 3. Business rule: Pro — automatic. Con — less visible workflow configuration and maintenance can be code-heavy.
2 J&P — JOBS & PROBLEMS Submit Standard Laptop request; obtain approval; create the fulfilment task; assign Hardware; fulfil and close the task; keep status traceable.	9 RC — ROOT CAUSE Approval and Hardware fulfilment are separate records/actions unless an automation connects the approval outcome to task creation and assignment.	7 BE — BEHAVIOUR Technician checks the assigned task, reviews request and approval details, performs configuration, updates progress and closes the task.
3 ER — ENGINEERS BEFORE: Laptop request submission is approved and action has reached Hardware fulfilment state before requested or delayed handoffs. AFTER: confident that approved work is routed consistently; reassured by a visible task record.	10 SL — SOLUTION Flow Designer automation: The flow creates the task on submission and sets Approval to "Approved". The Catalog Task uses short description: Laptop needs to Configured.	8.1 CH — ONLINE ServiceNow Service Catalog, Requested Item, Approval record, Flow Designer and Catalog Task.
