

PROJECT REPORT

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Detail	Value
Team ID	SWTID-2026-9532
Date	01 October 2026
Project Platform	ServiceNow
Core Solution	Service Catalog + Flow Designer
Team	Vishal M; Hari Prasath M; Jenusha Fredrin J; Amudhan A S

1. INTRODUCTION

1.1 Project Overview

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer is a ServiceNow-based IT procurement automation project focused on a Standard Laptop catalog request. It connects request submission, approval and Hardware fulfilment through Flow Designer.

1.2 Purpose

The purpose is to streamline standard laptop procurement by associating a Flow Designer flow with the Standard Laptop catalog item and creating a Hardware fulfilment task after the required approval condition.

2. IDEATION PHASE

2.1 Problem Statement

Manual IT hardware procurement can require repeated checking of request status, approval status and fulfilment hand-off. The project addresses this transition using ServiceNow Flow Designer.

2.2 Empathy Map Canvas

Perspective	Project understanding
Says	Requester wants a simple way to submit and track a laptop request.
Thinks	Approver needs confidence that only valid requests proceed.
Does	Requester submits; approver approves/rejects; Hardware team fulfils.
Pain	Manual hand-offs can create delay and uncertainty.
Need	Automated task creation after approval and clear Hardware assignment.

2.3 Brainstorming

Alternatives considered included Business Rules, UI Actions, Assignment Rules, Scheduled Jobs, email-based hand-off, manual processing, Orchestration/IntegrationHub and SLA reminders. The project implementation uses Flow Designer.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

Stage	User action	System / team response
Request	Submit Standard Laptop order.	Service Catalog creates request and RITM.
Approval	Approver reviews request.	Approval record is updated.
Automation	Approved request becomes eligible.	Flow Designer creates Catalog Task.
Fulfilment	Hardware technician receives task.	Task is assigned to Hardware.
Tracking	Requester checks progress.	Request/RITM provides visibility.

3.2 Solution Requirements

Requirements include Standard Laptop catalog item; approval handling; Flow Designer flow; Create Catalog Task; Requested Item input; short description **laptop need to configured**; Hardware assignment; Process Engine association; and verification of the resulting task.

3.3 Data Flow Diagram

Level-0 flow: Requester → Standard Laptop request → sc_request/sc_req_item → sysapproval_approver → approval decision → Flow Designer → sc_task → Hardware team. Data stores: sc_request, sc_req_item, sysapproval_approver

and sc_task.

3.4 Technology Stack

Layer	Technology / Component
Platform	ServiceNow
Service request	Service Catalog
Automation	Flow Designer / Workflow Studio
Request records	sc_request / sc_req_item
Approval	sysapproval_approver
Fulfilment	Catalog Task / sc_task

4. PROJECT DESIGN

4.1 Problem Solution Fit

The solution connects a standard laptop request to an automated fulfilment hand-off. The requester uses Service Catalog, the approver uses the approval record, and Hardware receives the resulting task.

4.2 Proposed Solution

Create Standard laptop task, trigger from a Service Catalog request, pass the Requested Item into Create Catalog Task, set the short description, assign Hardware and associate the flow with Standard Laptop. An explicit approval condition must precede task creation.

4.3 Solution Architecture

Component	Responsibility
Requester / Service Catalog	Submit Standard Laptop request
Requested Item	Represent requested laptop item
Approval	Record approval/rejection
Flow Designer	Automate fulfilment hand-off
Catalog Task	Create and assign Hardware work
Hardware team	Configure/fulfil request

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The backlog contains 11 user stories across four sprints with 27 story points.

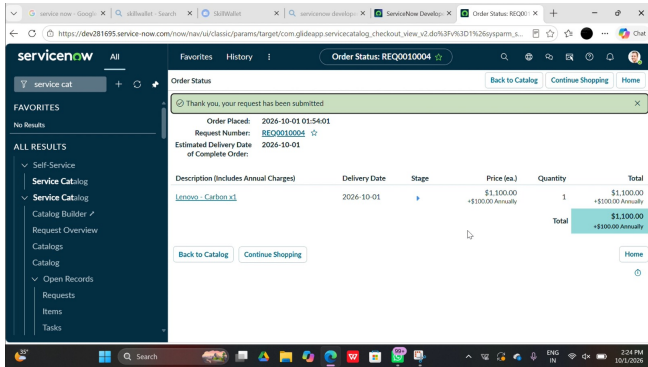

Sprint	Stories	Points	Planned dates
Sprint-1	USN-1, USN-2	5	05–09 Oct 2026
Sprint-2	USN-3, USN-4, USN-5	8	12–16 Oct 2026
Sprint-3	USN-6 to USN-10	12	19–23 Oct 2026
Sprint-4	USN-11	2	26–30 Oct 2026
Total	11 stories	27	4 sprints

Planned velocity is 6.75 story points per sprint and 1.35 points per day. Actual completion values were not supplied and are not fabricated.

6. FUNCTIONAL AND PERFORMANCE TESTING

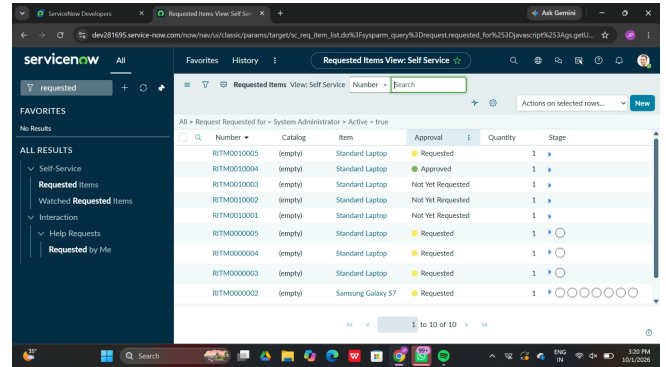

6.2 Evidence of Functional Execution

Figure 1 — Order Status / REQ0010004

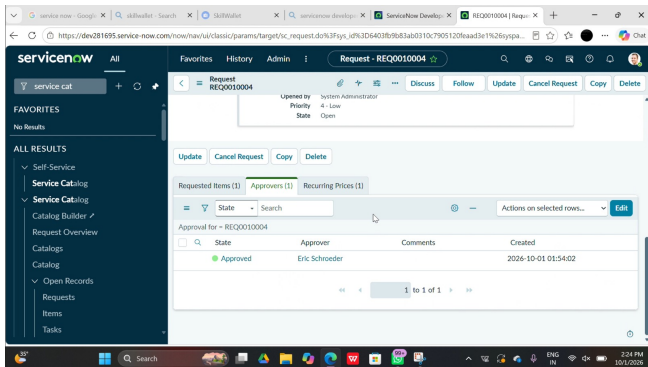

Submitted Standard Laptop request and order details.

Figure 2 — Approved Request

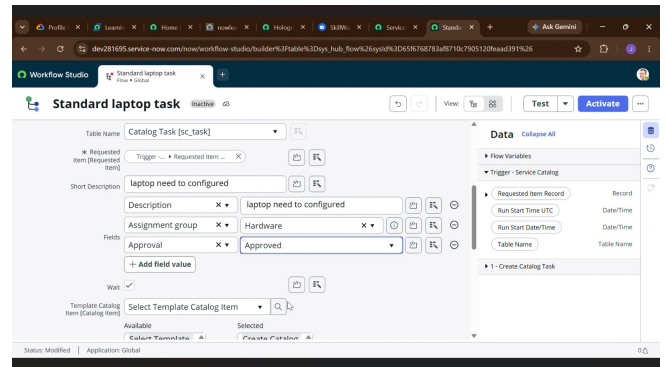

REQ0010004 approval record showing Approved.

Figure 3 — Requested Items

Requested Items list showing documented approval states.

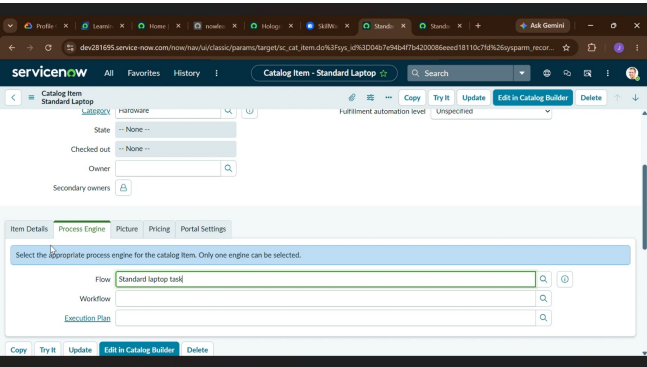

Figure 4 — Flow Designer Overview

Standard laptop task flow with Service Catalog trigger and Create Catalog Task.

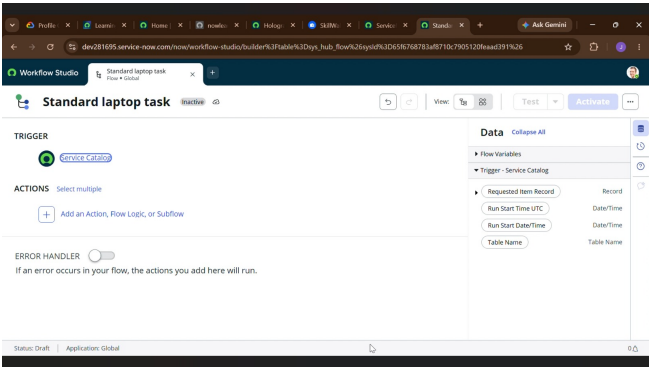

6.2 Evidence of Functional Execution

Figure 5 — Create Catalog Task Configuration

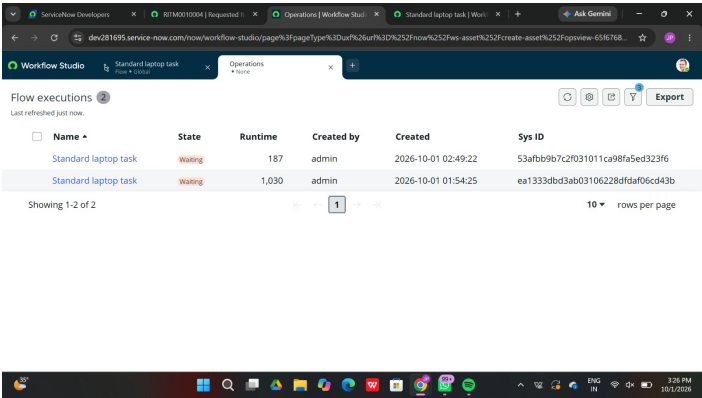

Task table, Requested Item input, description and Hardware assignment.

Figure 6 — Process Engine Association

Standard Laptop catalog item associated with Standard laptop task.

Figure 7 — Flow Executions

Recorded flow executions in the ServiceNow instance.

7. RESULTS

7.1 Recorded Output

Output	Evidence
Request	REQ0010004 submitted 01 Oct 2026 at 01:54:01
Item	Lenovo - Carbon x1; quantity 1; price \$1,100
Approval	Approved by Eric Schroeder
Requested Item	RITM0010004 — Approved
Flow association	Standard Laptop → Standard laptop task
Task	SCTASK0010004; Hardware assignment; expected short description
Negative-path issue	Pending request RITM0010005 was observed with a Catalog Task

9. CONCLUSION

The project demonstrates a ServiceNow-based approach for standard laptop procurement. The documented evidence covers request submission, approval, flow configuration, catalog-item association and task automation. UAT identified an approval-control defect, with the latest result of 6 Pass, 1 Fail and 1 Not Tested.

10. FUTURE SCOPE

- Enforce explicit approval condition before task creation.
- Block task creation for rejected requests.
- Add notifications and fulfilment tracking.
- Extend automation to additional IT hardware.
- Add regression and negative-path tests.
